## OFFSHORE WIND INNOVATION CHALLENGE

### CO<sub>2</sub> neutral shipping for offshore wind

One of the elements in CO<sub>2</sub> emissions, which are related to the offshore wind farms during their life cycle, is shipping. This includes large installation vessels as well as smaller crew transfer vessels.

This challenge aims to generate concepts for CO<sub>2</sub> neutral shipping for offshore wind in the area of the CTVs or SOVs. We expect to see ideas for the development of these vessels that will be evaluated on CO<sub>2</sub> footprint, cost, addressable market and time to market.

Apply before the 10th of June at:
